

◆ INTRODUCTION

Aufhauser Aluminum 1100 is highly resistant to chemical attack and weathering. It is a relatively soft alloy that is very formable and is used extensively in thin gauge and foil products. It has good welding characteristics and is also used as a filler alloy for welding purposes. A desirable characteristic of the alloy is the bright finishes obtained by anodizing.

◆ APPLICATIONS

- Welding filler wire
- Rivets
- Heat exchangers
- Tie wire
- Food handling equipment
- Metallizing

◆ GENERAL INFORMATION

- Non-Heat treatable
- ISO designation: AI99.0 Cu
- Principle alloying elements: Copper
